

Profile

I came into frontend through Vue in 2021, and the work has been drifting backwards through the stack ever since.

What I look for is work where almost correct is not good enough. So far that has meant money and medical planning. I live in Ukraine and work remotely with Computools.

COMMERCIAL SINCE
2022

NOW
Backend and full-stack at Computools

CORE
TypeScript, React, Node.js,
PostgreSQL

Experience

Computools

Oct 2023 to present

Ukraine / Remote

Backend Software Engineer

Aug 2026 to present

Backend services for a production mobile platform covering authentication, onboarding, matching, messaging, interview scheduling, notifications and moderation. Most of the work sits behind the endpoints: caching, rate limiting, background jobs, migrations and keeping data consistent across flows that touch several tables at once.

NestJS / TypeScript / PostgreSQL / TypeORM / Redis / AWS / Docker

Full-Stack Software Engineer

Aug 2026 to present

Features built end to end on a standards editing platform: database schema, REST endpoints, frontend state and UI. A large part of it is a structured document editor on ProseMirror, wired into generation and rewriting flows through the OpenAI API.

React / TypeScript / Fastify / PostgreSQL / Knex / ProseMirror / OpenAI API / Zustand / Vitest

Frontend Software Engineer

Oct 2025 to Jul 2026

Frontend for a healthcare product used to plan surgeries. Planning workflows, long validated forms, dense tables and print-ready views, all driven by strongly typed API contracts. A good share of the time went into Playwright and Vitest coverage, because regressions in this kind of product are expensive.

React / TypeScript / TanStack Query / TanStack Router / Material UI / Playwright / Vitest

React Developer

Mar 2024 to Jul 2026

Built and maintained a client portal in React and TypeScript: shared UI components, localization and the data layer on top of TanStack Query and Zustand.

React / TypeScript / Tailwind CSS / shadcn/ui / TanStack Query / Zustand

Middle Vue Engineer

Oct 2023 to Feb 2024

Vue 3 applications with TypeScript and Vuetify, working across both the Options and Composition API in a codebase that predated me. Requirements came straight from the client.

Vue 3 / TypeScript / Vuetify / SCSS / Tailwind CSS

IntenseLab

Jun 2022 to Nov 2023

Lviv, Ukraine / Hybrid

React Developer

May 2023 to Nov 2023

Rebuilt the platform's Vue functionality in React and TypeScript without losing real-time behavior or changing what existing users were used to. State moved to Zustand and the configurable dashboard grids were reimplemented from scratch.

React / TypeScript / Zustand / WebSockets / REST

Vue.js Frontend Developer

Jun 2022 to Nov 2023

Frontend of a cryptocurrency platform with live market data. Draggable, configurable dashboard layouts, reusable components and the asynchronous data flows behind them, then the groundwork for moving the product to React.

Vue.js / TypeScript / WebSockets / REST / SCSS

Freelance

Jan 2022 to Jun 2022

Lviv, Ukraine / Independent

Frontend Developer

Jan 2022 to Jun 2022

Small commercial sites and landing pages for e-commerce and service businesses, including wine retail, perfume and solar energy. WordPress builds plus Vue for the parts that needed real behavior, handled directly with clients from requirements to delivery.

Vue.js / JavaScript / WordPress / SCSS

Viseven

Aug 2021 to Nov 2021

Zhytomyr, Ukraine / Part-time

Vue.js Development Student

Aug 2021 to Nov 2021

A structured start in frontend development with Vue: components, props and events, state basics and API integration, with practice projects alongside the theory.

Vue.js / JavaScript

Projects

Finance

2025 to present

A personal finance application I built on both sides. The frontend handles monthly budgeting, transactions, savings goals, spending analytics, multi-currency balances and configurable PDF reports. The backend covers authentication with Google OAuth and refresh token rotation, month rollover, savings operations and activity streaks. It is where I get to try the things client work does not leave room for.

Next.js / React / TypeScript / NestJS / MongoDB / TanStack Query / Chart.js

Skills

Frontend

React · Next.js · Vue 3 · TypeScript · JavaScript · Tailwind CSS · Material UI · SCSS

State and data

TanStack Query · TanStack Router · Zustand · SWR · React Hook Form · Zod · Axios

Backend

Node.js · NestJS · Fastify · PostgreSQL · TypeORM · Knex · MongoDB · Mongoose · Redis

Infrastructure and testing

Docker · AWS · GitHub Actions · CI/CD · Playwright · Vitest · Jest

Engineering

REST API design · Authentication and authorization · Caching and rate limiting · Background jobs · Database migrations · Real-time data over WebSockets · Production debugging · Code review

Education

Zhytomyr Agrotechnical College

2015 to 2019

Junior Specialist / Computer Systems and Software Maintenance

Professional qualification: technician-programmer.
