DESIRED POSITION

Full-Stack Engineer (TypeScript, React, Node.js)

Open to full-stack, frontend and backend roles

§01 SUMMARY

I build web products in TypeScript on both sides of the API. React and Next.js on the front, NestJS and Fastify on the back, with PostgreSQL, MongoDB and Redis underneath. I came into frontend through Vue in 2021, and the work has been drifting backwards through the stack ever since.

Not all of the work has been code. I have set up and run task boards in Jira, Linear, Notion, Asana and Confluence, broken features into tickets someone else can pick up, and put estimates on them that held. When a problem had no owner I took it on, even outside my role: budgeting for teams, fixing how time was logged and reported, and helping shape the business model of a product. I know how a project should run from idea to release, which people the team needs, and how to plan the work so the estimate means something.

What I look for is work where almost correct is not good enough. So far that has meant money and medical planning. I live in Ukraine and work remotely with Computools.

§02 SKILLS

FRONTEND AND MOBILE	React · Next.js · Vue 3 · React Native (basics) · TypeScript · JavaScript · Tailwind CSS · Material UI · Radix UI · SCSS
STATE AND DATA	TanStack Query · TanStack Router · Zustand · SWR · React Hook Form · Zod · next-intl
BACKEND	Node.js · NestJS · Fastify · PostgreSQL · TypeORM · Prisma · Knex · MongoDB · Redis
INFRASTRUCTURE AND TESTING	Docker · AWS · GitHub Actions · Vercel · Railway · Playwright · Vitest · Jest
ENGINEERING	REST API design · Authentication and authorization · Caching and rate limiting · Background jobs · Database migrations · Real-time data over WebSockets · LLM integrations · Production debugging · Code review
PRODUCT AND DELIVERY	Jira · Confluence · Linear · Notion · Asana · Writing and grooming tasks · Estimation · Planning from idea to release · Team composition · Team budgeting · Time tracking and reporting · Business model design
LANGUAGES	Ukrainian: Native · English: B2, Upper-Intermediate · Russian: Fluent

§03 EXPERIENCE

Computools

OCT 2023 – PRESENT · UKRAINE · REMOTE

2026.08 → NOW

Backend Software Engineer

Backend services for a production mobile hiring platform covering authentication, onboarding, matching, messaging, interview scheduling, notifications and moderation.

- → Design and build REST endpoints for the mobile clients, from schema to documentation
- → Add caching and rate limiting with Redis on the hot paths
- → Move slow work into background jobs and keep multi-table writes consistent
- → Write and review database migrations, integrate third-party services

NestJS / TypeScript / PostgreSQL / TypeORM / Redis / AWS / Docker

2026.08 → NOW

Full-Stack Software Engineer

A standards editing platform: a structured document editor on ProseMirror, wired into generation and rewriting flows through the OpenAI API.

- → Deliver features end to end: database schema, Fastify endpoints, frontend state and UI
- → Keep ProseMirror editor state in agreement with the document model and the database
- → Build scheduled jobs, email flows and file processing
- → Cover the logic with Vitest tests

`React / TypeScript / Fastify / PostgreSQL / Knex / ProseMirror / OpenAI API / Zustand / Vitest`

2025.10 → 2026.07

Frontend Software Engineer

Frontend for a healthcare product clinicians use to plan surgeries: planning workflows, long validated forms, dense tables and print-ready views.

- → Build planning flows with a lot of interdependent state
- → Drive every screen from strongly typed API contracts and TanStack Query
- → Make print output match what the user sees on screen
- → Write Playwright and Vitest coverage, because regressions here are expensive

`React / TypeScript / TanStack Query / TanStack Router / Material UI / Playwright / Vitest`

2024.03 → 2026.07

React Developer

A client portal in React and TypeScript.

- → Build and maintain shared UI components on Tailwind CSS and shadcn/ui
- → Set up localization across the portal
- → Own the data layer on TanStack Query and Zustand

`React / TypeScript / Tailwind CSS / shadcn/ui / TanStack Query / Zustand`

2023.10 → 2024.02

Middle Vue Engineer

Vue 3 applications with TypeScript and Vuetify in a codebase that predated me.

- → Develop features across both the Options and the Composition API
- → Take requirements directly from the client and turn them into tasks

`Vue 3 / TypeScript / Vuetify / SCSS / Tailwind CSS`

IntenseLab

JUN 2022 – NOV 2023 · LVIV, UKRAINE · HYBRID

2023.05 → 2023.11

React Developer

Rebuilt a cryptocurrency platform from Vue in React and TypeScript while it stayed in production.

- → Port existing functionality without changing what users were used to
- → Keep real-time WebSocket behavior intact through the migration
- → Move state to Zustand and reimplement configurable dashboard grids

`React / TypeScript / Zustand / WebSockets / REST`

2022.06 → 2023.11

Vue.js Frontend Developer

Frontend of a cryptocurrency platform with live market data.

- → Build draggable, configurable dashboard layouts
- → Develop reusable components and the asynchronous data flows behind them
- → Lay the groundwork for moving the product to React

`Vue.js / TypeScript / WebSockets / REST / SCSS`

Freelance

JAN 2022 – JUN 2022 · LVIV, UKRAINE · INDEPENDENT

2022.01 → 2022.06

Frontend Developer

Small commercial sites and landing pages for e-commerce and service businesses, including wine retail, perfume and solar energy.

- → Build WordPress sites, with Vue for the parts that needed real behavior
- → Work directly with clients from requirements to delivery

`Vue.js / JavaScript / WordPress / SCSS`

---

§04

PERSONAL PROJECTS

2025 – PRESENT

Finance

A personal finance application built on both sides. The frontend handles monthly budgeting, transactions, savings goals, spending analytics, multi-currency balances and configurable PDF reports. The backend covers authentication with Google OAuth and refresh token rotation, month rollover, savings operations and activity streaks.

`Next.js / React / TypeScript / NestJS / MongoDB / TanStack Query / Chart.js`

Live: finance-front-zeta.vercel.app Frontend: github.com/bohdanhora/finance-front Backend: github.com/bohdanhora/finance-backend

2026 – PRESENT

Sport Calorie

A calorie and fitness tracker that shows today's food, walking and workouts the moment it opens. Foods and routines are saved once and logged again in a tap, a weekly calendar takes drag-and-drop plans, and a dish can be described in words or photographed to get a draft entry. On the backend every formula, from BMR and TDEE to MET-based burn and the ACSM walking equation, lives in a pure domain layer covered by unit tests. Localized in English, Ukrainian and Russian.

`Next.js / React / TypeScript / TanStack Query / next-intl / NestJS / Prisma / PostgreSQL / Playwright / Jest`

Live: sport-calorie.vercel.app Frontend: github.com/bohdanhora/sport-calorie Backend: github.com/bohdanhora/sport-calorie-back

2026 – PRESENT

Personal Planner

A daily planner that keeps work and personal life in one calm list. Tasks sit on days or in an inbox, belong to projects with short codes, and move by drag and drop between the day list, the week strip, the week board and the inbox, on desktop and on touch. Insights show completed against planned, focus time, streaks and a project breakdown, computed in a pure domain layer. An assistant turns free text into tasks, plans a day inside working hours and proposes tasks in chat, running on the AI provider each person connects with their own key, stored encrypted with AES-256-GCM. Accounts use an emailed six digit code or Google, with rotating refresh tokens. Localized in English, Ukrainian and Russian.

`Nuxt / Vue / TypeScript / TanStack Query / Pinia / Tailwind CSS / NestJS / Prisma / PostgreSQL / Jest`

Live: personal-planner-production-93b2.up.railway.app Frontend: github.com/bohdanhora/personal-planner Backend: github.com/bohdanhora/personal-planner-back

2026 – PRESENT

SkinScout

A market scanner for CS2 skins across white.market, DMarket, CSFloat, lis-skins and the Steam Market. It finds items that are cheaper on one marketplace than another, resale spreads that survive the fees, and listings whose float, pattern or Doppler phase already qualifies for a higher buy order. Prices are compared with eight weeks of sales history, liquidity and order depth, and an AI assessment scores a lot on top of that. Sign-in goes through Steam OpenID, and a public Steam inventory can be valued per marketplace after fees.

`Next.js / React / TypeScript / TanStack Query / NestJS / TypeORM / PostgreSQL / Anthropic API / Docker`

Live: skins-front-production.up.railway.app Frontend: github.com/bohdanhora/skins-front Backend: github.com/bohdanhora/skins-back

§05

EDUCATION / COURSES

2015 – 2019

Zhytomyr Agrotechnical College

Computer Systems and Software Maintenance. Junior Specialist. Professional qualification: technician-programmer.

AUG 2021 – NOV 2021

Vue.js development program, Viseven

Components, props and events, state basics and API integration, with practice projects alongside the theory.
